McKinney & Company Announces New President and CEO

The executive board of McKinney & Company today announced that it has selected Nancy B. Walker, P.E., as the company's new President and Chief Executive Officer. Walker has been a member of McKinney & Company's Board of Directors for 13 years and, most recently, held the position of Director of Structural Engineering. Walker, a graduate of Virginia Polytechnic Institute and State University, succeeds Frank Wilson who will continue serving in the role of Principal on the company's executive board.

"For the past 26 years, Nancy has provided integral experience and leadership throughout the various disciplines of this firm," said Art McKinney, Senior Principal and Chairman of the Board for McKinney & Company. "She has strong project experience working with professionals in all disciplines of architecture, engineering and construction. Her deep roots within the company, experience with a variety of clientele, and long history in the industry will provide the company with the expertise needed to thrive in a competitive, ever-changing market."

"Throughout its 31 years McKinney & Company has enjoyed strong, creative leadership and I am excited for the opportunity to lead the company into the next chapter of its history," said Walker. "We, as a company, are organizing ourselves to continue providing the quality work for which we are known, while positioning the company to meet the challenges of the future."

In addition to a change in leadership, McKinney & Company's professional disciplines will be realigned and headed by two new management positions within the company. Roy Sebring, P.E., a 3-year member of the company's Board of Directors, will serve as Director of Architecture & Engineering. Chris Poulson, the company's former manager of construction services, will serve as Director of Construction.

McKinney & Company, with offices in Ashland and Williamsburg, Virginia, and the Republic of Panama, is a multi-discipline planning, design and construction firm known for innovation in the solution and realization of complex problems and projects. Specializing in total project delivery for the life sciences, critical facilities and complex manufacturing markets, McKinney & Company has an unusual ability to carry projects through every stage from start to finish. Since 1979, the company has built a reputation on the successful delivery of client-centered solutions to complex problems - on schedule, on budget and on the client's terms.
